

Hi Friends,

. As you notice in the attached, that colonoscopy has been the most beneficial in healthcare and has diminished the incidence of colon cancer. Each year, tens of thousands of people die from colon cancer. That's a sad truth, and it's even more saddening because most of those men and women could still be alive if they had gotten their recommended cancer screenings. In fact, it's estimated that 60 to 90 percent of colon cancer deaths could be prevented if everyone over 45 got a colonoscopy.

Why a Colonoscopy?

Simply put, a colonoscopy is the best way to check for colon cancer. It's the only screening exam that not only checks for cancer but also treats it by removing cancerous polyps. Not only that, you can expect the procedure and the recovery to both be pain free!

As of May 2018, due to an increased incidence of colon cancer in younger adults, it is recommended by the American Cancer Society to start regular screening at age 45, or younger if you have a family history of colon cancer.

Make Your Health a Priority!

If you're over 45, don't put off colon cancer screening any longer.

Please see attached information about colon cancer.
